

Using the linked list class made during class, add these functions to the Bag being implemented as a linked list:

```
int get_second( );
```

```
// returns the value in the second node of the linked list. HINT: use ->...->
```

```
void add_multiple( int entry, int how_many ); //
```

```
inserts how_many copies of the entry into the list
```

```
bool same_firstTwo( List list1, List list2 );
```

```
// returns true if the first and second nodes in the two Lists are identical;
```

```
// returns false otherwise
```
