wk3_Car_lab_pwiese

Define a class for a car. Every car has a make, model, number of doors, number of passengers, and year of manufacture.

In the definition for the Car class, include a default constructor, accessor functions for all member variables and mutator functions of all member variables.

Test you class definition with a main( ) function that uses all member functions.

BE SURE your class is defined and implemented in a single .cpp file.
