wk9_bag_lab

Add the following functions to the ArrayBag class:

- int showSum();   // computes and returns the sum of values in the ArrayBag
- int largest();   // finds and returns the largest value in the ArrayBag
- bool operator == (ArrayBag); // returns true if the two ArrayBags have the same number of items in the bags
- void removeAll(int);   // removes all copies of the target value in the ArrayBag
